

Sanapur[®]

Recommended by physiotherapists.

The SANAPUR ORIGINAL MicroTENCEL[®] pillowcase:
Ultra fine - Ultra soft - Thermoregulation

The new SANAPUR PuraCell[®] Cosy Soft cover.

Advantages

- Ultra fine and ultra soft for a luxurious and velvety feeling.
- Breathable, improved moisture management and heat regulation.
- Significantly reduced pilling (formation of nodules on the surface).
- Is extracted from eucalyptus wood. (see below "Closed Loop" system)
- ÖKOTEX Standard 100 Class 1 (baby class)
- suitable for allergy sufferers and washable up to 60°C

Lenzing Micro Tencel[®], the fiber for TencelTM Micro, is spun from fibers of eucalyptus wood pulp certified by the FSC (Forest Stewardship Council), which is processed in a closed-loop system recognized by the European Union as safe and sustainable. Fabrics made with this optimal blend are stable, durable, soft, silky and offer desirable functions not found in other cellulosic fibres. MicroTENCEL[®] naturally inhibits the growth of bacteria and provides improved moisture transport performance, which

leads to a better distribution of moisture on the surface. The evaporation of sweat removes excess body heat and keeps you cool. The removal of sweat also increases personal comfort. The use of micro-denier fibers allows more fibers in the yarn cross section, which increases the performance of yarn and fabric in terms of strength, softness, draping, nodulation and gloss. Due to the high dimensional stability in dry and wet condition, TencelTM Micro fabrics are ideal wherever the highest quality is required.
